## SUMMARY

I'm a Web Developer from the marketing and creative industry. Skilled in HTML5, CSS3(SCSS, BEM, Tailwind), JS,, TS, Vue ⅔., Nuxt,, React Native, PHP, Laravel, and WordPress. Prefer working on Front-end technologies. Focused on clean and clear code. I'm a pedant and perfectionist in coding and doing my job perfectly. I'm not sitting in one pose, trying to always be in touch with modern technologies and learn new things every day to write a better, faster, and easier to understand program code.

Mostly I am working with Vue, but i also have experience with react native, maybe someday I will back to developing mobile apps, but for now this is not my agenda.

## EXPERIENCE

### @Flightradar24 — *Front-end developer*

September 2021- PRESENT
- Developing the internal web app, a new single-page application.
- Responsible for creating new components and functionality, implementing new features, creating composable code, reusable components,  making deep refactoring for the old web application code, writing unit, and E2E tests, .
